# i18n Key Usage Report

## How To Interpret

- **Used keys**: static literal translation calls that resolve to known keys.
- **Unused keys**: keys in `en-US-componentTranslations.json` not found via static or inferred dynamic call scanning.
- **Unresolved translation calls**: literal translation calls that do not map to a known key (possible typo, missing key, or different namespace).
- **Dynamic translation callsites**: non-literal translation calls (template strings/expressions). The report attempts wildcard inference (e.g., `gameTabs.*Name`) but this remains heuristic.
- Total keys scanned: 136
- Used keys (static literal): 67
- Used keys (dynamic inferred): 59
- Used keys (adjusted total): 107
- Unused keys (adjusted): 29
- Unresolved translation calls: 5
- Dynamic translation callsites (static unresolved): 8

## Unresolved Translation Calls

- `authSignIn.atLeastOneUppercase`
- `permissions.loading`
- `profile.settings.language`
- `profile.settings.languageDescription`
- `profile.settings.settings`

## Dynamic Translation Callsites

*These calls use non-literal expressions and cannot be fully resolved without runtime tracing or deeper AST/data-flow analysis.*

- `src/components/ConsentModal.vue` -> `consentModal.${_lowerCase(props.consentType)}UpdatedStatus`
- `src/components/GameTabs.vue` -> `gameTabs.surveyName${_capitalize(props.userData.userType)}Part1`
